A Message From the President

Welcome to our 2014 annual donor report. On the following pages, we have captured a glimpse of the remarkable work you are supporting at Spectrum Health and Helen DeVos Children’s Hospital.

In this report, you will meet champions who represent several programs and services that have benefited from philanthropy. These donors, patients, families and clinicians who have shared their stories inspire us. Like you, they are focused on improving health care for our region.

As a donor to Spectrum Health, including Helen DeVos Children’s Hospital, your gifts are making a difference as we strive to provide patients and families with innovative, life-changing care. You are helping us lead the way to a healthier future for all those we serve. Thank you!

Sincerely,

Vicki Weaver, President
Spectrum Health Foundation
Helen DeVos Children’s Hospital Foundation
“You are helping us lead the way to a healthier future for all those we serve.”
A Message From Our Board Chairs

Improved health and wellness can be achieved in many ways throughout a lifetime of care. Much of that care will be offered in a hospital or physician’s office, while other services will be provided in locations such as schools or community centers.

This report provides a perspective on the wide range of donor impact that is happening in the many communities Spectrum Health serves. Donors are helping to bring advanced care and breakthrough research as well as patient and family support to our region.

We appreciate your support and commitment to Spectrum Health, including Helen DeVos Children’s Hospital. Thank you for joining us in the pursuit of improved health care for West Michigan.

Davey Mehney, Board Chair
Spectrum Health Foundation

Patricia Betz, Board Chair
Helen DeVos Children’s Hospital Foundation
Thank You to Our Boards of Trustees

As trustees of Spectrum Health Foundation and Helen DeVos Children’s Hospital Foundation, your passionate leadership helps us advance health care through philanthropy. Your unwavering commitment to our patients and their families makes it possible to advance the health and well-being of our community. Thank you for leading by example with dedication and generosity. You are making a difference as together we help save lives and inspire hope for those who count on us every day for care.
“With your help, we are able to pursue new and better treatments that benefit patients of all ages.”
As Spectrum Health continues to meet the needs of our region and anticipates the best way to deliver health care tomorrow, our donors play a vital role. Your gifts are helping us expand clinical programs and research, survivorship and family support initiatives, as well as community outreach.

Together, these elements of our organization are improving the health of the communities we serve, which is our mission and guiding principle. Philanthropy helps launch and sustain programs that are often one-of-a-kind in our region, bringing people the care they need closer to home.

With your help, we are able to pursue new and better treatments that benefit patients of all ages. On behalf of all of Spectrum Health, I thank you for your support.

Richard C. Breon
President & CEO
Spectrum Health
Transforming Health Care

Spectrum Health is often the source for health and healing in the communities we serve. Your gifts help to ensure that we can provide needed health care services across West Michigan.

On the following pages, you will see how your gifts are helping us provide expert and innovative clinical services related to cancer, heart, obstetrics and emergency care as well as community health outreach programs for individuals of all ages. We are grateful that generous donors are committed to both the longtime tradition as well as the future possibilities associated with our hospitals. Together, we can continue to build new programs and services that enhance the health and wellness of those we serve.

Thank you for your dedication and passion in helping us improve health care throughout our region. You are making a difference.

Tina Freese-Decker  
President  
Spectrum Health Hospital Group
Only the Best for Our Kids

Philanthropy has been a cornerstone of Helen DeVos Children’s Hospital since its inception and continues to be a driving force in our ability to advance care for our young patients and their families.

Not only have our donors helped us create an extraordinary place for healing and family-centered care, they help us launch programs, including a new family support program featured in this report. Your gifts help us expand lifesaving programs like our congenital heart center, which continues to grow as many more children seek our care for heart defects. You also are helping us pursue research to discover more effective treatments for children facing life-threatening diseases and chronic conditions.

Thank you for supporting Helen DeVos Children’s Hospital. It is a privilege to partner with you in serving the children of West Michigan.

Robert H. Connors, MD
President
Helen DeVos Children’s Hospital
Champion of Survival

Life After Cancer

Deb Anderson experienced grueling treatment for cancer of her larynx, including radiation that destroyed her esophagus and required removal of her voice box.

However, when Deb’s treatment ended, she was faced with living as a cancer survivor—something almost as challenging as the treatment itself.

“There is a feeling of ‘now what?’ once you have finished treatment and are left to figure out your life after cancer,” Deb explained. “For example, I now have a speech valve that allows me to speak with a hoarse voice but requires regular visits to a speech pathologist. Physical therapy also helped me regain strength in my neck. I had scarring from radiation that limited movement, and my muscles were removed or rearranged during tumor removal, leaving my neck floppy with little control of my head.”

For Deb and other survivors, the STAR (Survivorship Training and Rehabilitation) Program® is available to minimize the side effects of cancer treatment, such as pain, fatigue and disability. Funds from Spectrum Health’s annual employee campaign along with gifts from donors in the community made it possible to implement the STAR Program® and certify 100 Spectrum Health professionals in oncology rehabilitation. The nationally recognized program, which includes physical, speech and occupational therapy, is offered at 25 Spectrum Health locations throughout the region.

“The Spectrum Health Cancer Center is proud of the exceptional patient care and multidisciplinary collaboration of our cancer specialists,” said Geralyn Roobol, cancer program manager. “Because of generous donors, we have added oncology rehabilitation to our care team to help patients maintain function and optimal quality of life through their treatment and into survivorship.”

Fortunately, the focus on survivorship is certain to increase for patients like Deb.

“As cancer research continues and treatment is perfected, survivorship is going to take on greater importance. STAR will help patients truly be survivors,” said Deb.
Champions of Discovery

Predicting Heart Attacks

For patients who have experienced a severe heart attack, like Cary Glonek, one of the greatest fears is having another one. Now he is helping to solve that mystery.

Cary is participating in a research study to help doctors learn more about predicting second heart attacks before they happen. The study is led by Ryan Madder, MD, the physician who saved his life.

Dr. Madder, an interventional cardiologist, is conducting research to identify arterial plaques that block an artery and cause life-threatening heart attacks. His work is supported by the Frederik Meijer Heart & Vascular Institute, which is funded by philanthropic support.

Previous research during autopsies has shown that most major heart attacks are caused by the rupture of lipid core plaque (LCP), a type of plaque rich in cholesterol. However, Dr. Madder’s study was the first to document the presence of LCP in living patients having the most dangerous type of heart attack. The LCP was detected with the use of near-infrared spectroscopy (NIRS), a new imaging technology.

The study used the NIRS system to measure cholesterol in the plaques of 20 patients experiencing a severe heart attack. The measurements were made after blood flow was reestablished but before a stent was placed to keep the artery open. The findings were published in the Journal of the American College of Cardiology: Cardiovascular Interventions in 2013. Dr. Madder’s research also was included on Discover magazine’s list of the top 100 science stories of 2013.

Dr. Madder has another study under way that will enroll a total of 20 patients who have been identified as high-risk for a first heart attack. This study, which is the first of its kind, will determine if NIRS can help identify a heart attack before it happens. Subsequent studies would be designed to intervene with medicine or a procedure to prevent a first heart attack from occurring.

“These studies would not be possible without philanthropy that funds our research team and equipment,” Dr. Madder explained. “Although these initial studies are small, they represent a critical step toward obtaining additional funding for a larger study, where we can draw more definitive conclusions that will translate into substantial health benefits for patients.

“Research is key to pursuing answers for better treatment,” Dr. Madder said. “The advanced treatments we currently offer patients today, such as stents and other procedures, are possible because a researcher had an idea, received a grant to investigate the idea and successfully conducted research, which turned the idea into a viable treatment option. Without research, medical care will not improve.”
When Angela Schieber was 20 weeks pregnant, she learned that her unborn baby had hypoplastic left heart syndrome.

Blood was not moving as it should from the right side of the heart to the lungs, where it receives oxygen, and then back to the left side to be pumped through the baby’s body.

“Since most babies with this kind of heart defect don’t live very long, we were told about compassionate care to help us through that short time,” Angela said. “We also heard about terminating the pregnancy or being put on a prenatal heart transplant list for high-risk births.”

The Schiebers decided to fight for their little baby and give him every chance at life. They turned to Marcus Haw, MBBS, chief pediatric cardiovascular surgeon, and Joseph Vettukattil, MD, chief pediatric cardiologist at the Helen DeVos Children’s Hospital Congenital Heart Center. The Schiebers learned their baby boy would undergo a series of surgeries, with the first operation performed very soon after birth.

Baby Jackson was born on July 8, 2013, at a healthy weight of 8 pounds, 8 ounces.

“He was taken to the neonatal intensive care unit almost right away, after I had a chance to hold him for a little while,” recalled Angela. “It was scary, but the operation went really well. That first hospital stay for Jackson was 60 days.”

Jackson had his second surgery at Helen DeVos Children’s Hospital when he was about 6 months old. He will have the third surgery between the ages of 3 and 5.

“Today, Jackson is doing very well. To look at him, you wouldn’t know he had a heart defect,” said Dr. Vettukattil.

“Helping patients like Jackson would not be possible without the philanthropy that helped us establish this center and continues to fuel its growth,” said Dr. Haw. “We are caring for patients with very complex conditions, sometimes performing procedures that very few centers in the country or the world can offer. Every gift we receive, large or small, is being spent on life-changing care for patients at Helen DeVos Children’s Hospital.”
Champions of Family Support

Partners in Care

When one of Peter and Joan Secchio’s grandchildren needed to see several specialists at Helen DeVos Children’s Hospital, they saw firsthand how complicated the process could be.

The Secchias realized how challenging a similar experience could be for young parents with a sick child, particularly if they traveled from out of town to the hospital and needed to see multiple specialists over several days.

“We were fortunate that we could line up appointments within a day or two so it could be an efficient process and we could get the answers we needed quickly while our grandchild was here from out of town,” said Peter. “We wanted to make sure it could work that way for other families.”

The Secchias decided to make a major gift so a new support program could be established. The Peter and Joan Secchia CarePartners Program at Helen DeVos Children’s Hospital provides a guide or shepherd to help families with children who have complex health situations. The CarePartners coordinator will help schedule appointments in a compressed time frame so families can see several specialists in a short period of time.

“This level of care coordination is something we have wanted to offer for some time,” said Bob Connors, MD, president, Helen DeVos Children’s Hospital. “Peter and Joan have made this dream a reality for us. Their vision and generosity will make a difference for so many patients and families for years to come.”

The coordinator will also be at their side to help explain medical jargon, diagnostic information and help them through their course of treatment. Bill Bush, MD, is the medical director of the program.

“The children’s hospital is such a beautiful and amazing place. We wanted to be sure the experience that families have when going through a stressful time with their child is equally as special,” said Joan.
Champion of Giving

A Catalyst for Local Care

Some people exude a contagious energy and passion that helps inspire and motivate others. Meet Delores “Dee” Van Horn. She has been involved in community projects in both Big Rapids and Reed City throughout her life.

“Dee sees a need and rolls up her sleeves to help,” said Mary Kay Van Driel, president of Reed City and Big Rapids hospitals. “She seeks people out, engages them and holds everyone together like glue.”

Dee attributes her passion for volunteerism and fundraising to her mother, who was a high-energy, involved person.

“She was my role model. We were taught to give back and care for those unable to care for themselves,” Dee said. “My passion for health care comes from this sense of helping those in need, and our personal experience with cancer and heart disease.”

When digital mammography was a possibility at Spectrum Health Big Rapids Hospital, Dee jumped in and helped with the fundraising effort so the equipment could be purchased. “Now it is so rewarding to hear women say that their cancer was diagnosed early because of this high-tech screening.”

More recently, Dee was asked by Susan P. Wheatlake to help with the capital campaign to build her namesake cancer center in Reed City. “It’s so exciting to see this become a regional hub for cancer care. In the past, people would forgo treatment because they didn’t want to travel. Now they are getting the treatment they need because it’s nearby.

“When donors invest in something they care about, it creates an energy in the community and signals that this is something important for us to support,” Dee said. “If we care about others—our neighbors, friends, children, grandchildren—it’s up to donors to encourage our hospitals to meet those needs. We are fortunate to have two great hospitals that can provide care for the people we love and care about.”
Champions of Generosity

A Legacy of Love

Some donors make gifts throughout their lifetime, and others leave estate gifts after they have passed away. Robert and Vivian Anderson did both.

The Andersons built a life in Grant, Michigan, based on loving family, caring for community, faithfully serving their church and helping others.

Vivian passed away in 2012 at the age of 97, and her husband, Robert, had passed 28 years earlier. One of their last wishes for helping others came as a bequest left in their will, a gift directed to Spectrum Health Gerber Memorial Hospital. It was up to their children to determine exactly how the gift should be used. The Andersons’ two daughters, Dawn and Lynne, and Lynne’s husband, Dave Robinson, decided to support the hospital’s new emergency department along with nursing education.

“Our parents set an incredible example of volunteerism and giving for us—it was a way of life for me and my sister, Dawn,” said Lynne. “They were concerned about the community and its well-being and wanted to work with others to find ways to make things better. However, they were humble people and never expected to be recognized for their giving. We decided on directing the gift to the new emergency department because we knew it could impact thousands of neighbors, families and visitors to our county who need emergency help. This will be part of our parents’ legacy for years to come.”

Dawn, Lynne and her husband, Dave, continue the tradition of helping others through their own extensive volunteer activities in Newaygo County, Grant and Fremont. They look at it as “just making someone else’s life a little easier.” They are making their parents proud every day with one act of generosity and kindness after another.
Champions of Wellness

**Kids Getting Fit**

Motivating kids to live healthy lives can be challenging. That’s why Spectrum Health Ludington Hospital is partnering with area schools on a new fitness program for children in kindergarten to eighth grade.

“Our hope is to foster a love of health and fitness in the students so their behaviors and choices will sustain them for a lifetime of wellness,” said Kathy Grierson, physician assistant and leader of the program. “We want to raise awareness of healthy living among these students and their families.”

Funds from the hospital’s 2013 Charity Ball presented an opportunity to support the Win With Wellness effort and Fit Club Program. In its first year, Fit Club had more than 700 children participating in five schools.

The program focuses on health maintenance, physical fitness, health education and disease prevention. Education includes heart health, sugar consumption and nutrition, germs and hand-washing, and information about cholesterol, body mass index and diabetes.

Fit Club also offers a 100 Mile Challenge, encouraging students to walk or run 100 miles between October and May. Participants earn awards for every 10 miles completed. The awards come from both Spectrum Health Ludington Hospital and community partners. For example, those completing 20 miles receive free access to the West Shore Community College gym, and the hospital provides a Fit Club T-shirt. At 70 miles, participants receive a pair of swim goggles and free access to the college pool.

“In just our first year, we’re seeing excitement and enthusiasm for the program among the students and their parents,” said Kathy. “The kids collectively have walked or run thousands of miles. We want to help them learn about healthy choices now so they can grow up to be healthy adults.”

**Physician Assistant Kathy Grierson with twins Summer and Autumn Brower, and Miles Clark**
Champions of Hometown Care

A Gift for Generations to Come

Bill and Harriette Cook are part of a circle of life in their hometown of Greenville. Bill was born at Spectrum Health United Hospital’s former location at the corner of Barry and Grove. He and Harriette also had their children at the hospital’s new location in the 1960s.

The hospital has played a role in their family for generations and they wanted to help ensure this would be available for other families in the future. The Cooks were the lead donors for the hospital’s recent $1.3 million obstetrics department renovation and expansion. They made the gift in honor of their three children, who have given them so much joy throughout their lives. They also saw this as a way to bring joy to others in the community.

“We were in a position to help the hospital and the community, so supporting the obstetrics project was a natural for us,” said Harriette. “We love this hospital, love the nursing care, it’s close to our home—it’s very much a part of our family.”

The Cooks have a long relationship with United Hospital. Harriette was president of the auxiliary board and was involved in the first fundraising project for United Hospital’s emergency department in 1976. The Cooks also were major donors for the Hendrik & Gezina Meijer Surgery & Patient Care Center.

Harriette and Bill have been married for more than 55 years. They have spent most of those years raising their children and contributing to the Greenville community they love.

“Growing up here, I have a desire to make this a good place to live,” said Bill. “Excellent medical care is critical to that standard of living. We want other families to experience the same peace of mind we had, knowing the hospital is here for the various stages of their life.”
Champion of Better Health

Harmonicas Help Patients

Pat Six had never played the harmonica. But he decided to give it a try when he learned that Spectrum Health Zeeland Community Hospital was offering a new program that could help his emphysema.

“I thought it sounded like a crazy idea, but it really does make a difference in my breathing,” Pat said. “Somehow blowing the harmonica helps clear airways and breaks up mucus in my lungs.”

Inhaling and exhaling with a harmonica can help improve lung function. The harmonica provides airflow resistance, which in turn exercises the lungs. People who have a breathing challenge such as chronic obstructive pulmonary disease (COPD), which includes asthma, emphysema and chronic bronchitis, can clear and strengthen their lungs with this type of exercise. Participants complete two surveys—one at the beginning of the program, asking them to rate their breathing with everyday activities and general feelings of wellness, and one at the end that includes identical questions and provides tangible evidence of their improvement, encouraging them to continue in the program.

The Harmonica Program for People With Breathing Difficulties is a six-month therapeutic class associated with the hospital’s Better Breathers Support Group.

A partner in the community, Tendercare Health & Rehab Center of Holland, funds the program, which is free of charge to participants.

“At Tendercare, we provide care and rehabilitation for many individuals with breathing difficulties and appreciate the proven benefits of this fun program,” said Kellie Lincourt, referral manager, Tendercare Health & Rehab Center of Holland. “We are proud to partner with Zeeland Community Hospital in bringing this program to individuals who can enjoy the class and experience health benefits.”

Pat is ready for the 2015 class to start.

“We’re not great musicians, but everyone is very accepting and open to sharing their skills in the class,” Pat said. “I’ll definitely be going back this year.”
Endowed Funds

Endowed funds provide permanent support for important programs and services that ensure excellence at Spectrum Health, including Helen DeVos Children’s Hospital. We are indebted to those of you who have established endowed funds, as well as those who support focus-area endowed funds. These funds help make it possible for our team of dedicated health care professionals to more fully and compassionately care for our patients and their families. Thank you for your commitment to advancing health care today and tomorrow.

Thank You to Our Guilds and Auxiliaries

Since the 1800s, concerned women have helped community members in need. That tradition continues today at Spectrum Health. Hundreds of guild members provide care and compassion to patients and their families through volunteer work and fundraising efforts. For decades, our guilds have contributed thousands of hours of service and innumerable funds to help us pursue our mission of improving the health of the community. We salute our guild members for their generous spirit and unwavering dedication.

Thank You!
In 2014, Spectrum Health Foundation and Helen DeVos Children’s Hospital Foundation were fortunate to receive 19,280 gifts, totaling more than $37.2 million. Thanks to your generosity, we were able to provide our patients and their families a broader, more sophisticated offering of high-quality services. Donations of all sizes support clinical care, patient and family support programs, and research and innovation initiatives.

Ways to Make a Difference

Giving takes many forms. A lemonade stand, high school football game or movie premiere all rally support for our patients and their families. So does a gift from a corporate donor or from a group leading a community event. All of these efforts have an impact on our patients and families. When we come together to support health care in our communities, we make a difference for those we serve.

Thank you for your generous support, whether it’s financial or a gift of time, energy and creativity. Every gift matters. If you would like more information on ways you can get involved, contact us or visit our website at spectrumhealthfoundation.org.

There is no limit to the ways you can get involved and give of your time, talents and resources. Here are some ideas:

- Sponsor and participate in one of our events (e.g., golf outings, gala or charity ball, community runs and walks, other fundraisers).
- Support local school fundraisers that benefit the hospital.
- Purchase wish list items to help patients and families.
- Create an endowment or planned gift.
- Volunteer at our hospitals and events, or join a guild.

If you would like more information on ways you can make a difference, contact the organization you are interested in working with:

Thank you for being a champion who changes lives.

Your commitment to health care makes it possible for us to continue advancing the programs and services we offer our patients and their families. Thanks to your support, we are able to offer needed expertise closer to home so families can access world-class care in West Michigan. Your gift matters and helps inspire others to become champions for a healthier tomorrow. Thank you!
